# Upgraded version of remote collaboration system

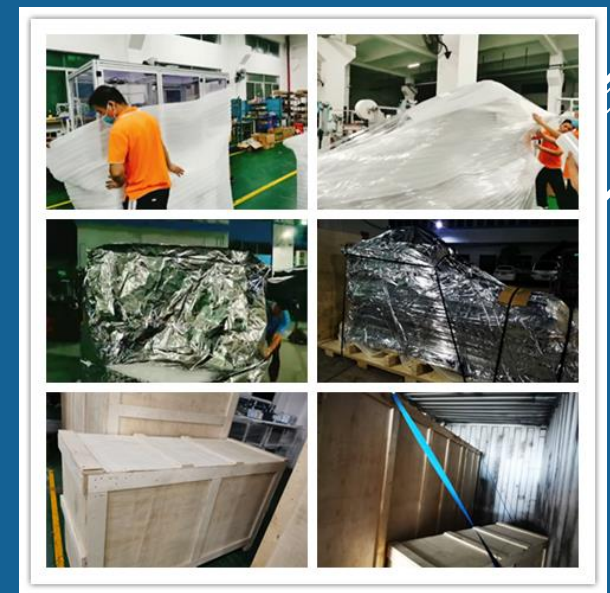

The remote collaboration system is composed of a network card and an ipod. Customers only need to configure a network cable in the production workshop and plug in the interface to realize a transnational remote link with our electrical engineers. According to production needs, when customers need to fine-tune the program, our electrical engineers can handle it in time.

In addition, this system also has the function of remote control operation at a short distance of 30 meters, which makes the operation of the machine more flexible, also realize that the operator can monitor and adjust the use status of the machine at any time.
